4. Scope

Within Scope:

- Create an application similar to the UTD mobile app with the ability to post similar to creating events students can RSVP to.
- Ability to create posts and threads for students to interact with and respond to (i.e. create a post asking who wants to play basket ball).
- Ability to arrange meetings with counselors (if possible incorporate within the app using an API or redirect to a site).
- Verify students are real by having them login with their UTD email.
- Allow students to send connection requests to each other and direct message once both students have accepted.

Outside Scope:

- Creation of databases to handle the amount of traffic the whole student body will have on campus.
- Enable video calls similar to omegle within the app.
- Use snap chat style people finder maps to find other like-minded people using the app. (Helps to find people to meet up with).
- We aren’t trying to create another social media like instagram.
- Video call chatting platforms would be very expensive and challenging to implement using our peers as infrastructure.
